

1029

Dear Superintendent Lawsky and General Counsel Syracuse,

Below is a form letter that EFF requested I send you. I first want to preface with my personal thoughts on the subject.

Bitcoin offers the possibility for the US to have a stable currency, one not affected by runaway inflation, one that cannot be bought off by deep pockets or swayed by politics, one that offers instant transactions to anywhere around the world with no having to ask permission from bureaucrats first. We in the Bitcoin community are not criminals, we just want to trade on the Internet in peace. Nothing personal, but please butt out.

Good ideas don't require force. Your regulation requires force to implement. Need I say more?

Now, on with the letter:

=====

I'm writing you today to express my deep concerns about the "BitLicense" proposal. The current framework threatens the privacy of virtual currency users, innovators, and researchers. In particular:

1. The BitLicense is extremely broad, requiring licenses for far more than just money services.
2. It infringes on the privacy rights of individual users. Companies that obtain a BitLicense could be forced to collect identifying data on account holders and end users including full name and physical address. This information will be kept on file for 10 years in case the government seeks it. So while individual users may not need a BitLicense, their privacy will be seriously affected.
3. It forces virtual currency innovators to undergo rigorous background checks and submit fingerprints to state and federal law enforcement. This will create a barrier to entry for start ups and inventors looking to create new services.
4. The proposal as written raises First Amendment concerns.

It's premature to craft regulations for an industry that's so new and still in flux. Bitcoin and similar virtual currencies are still in their infancy, and we don't yet know what new tools and services might be created. This regulatory proposal could cut that innovation off at the knees, before we have a chance to see the potential societal benefits.

The NY DFS is letting the fear of money laundering drive a massive regulatory proposal forward that would affect users who are doing nothing wrong. NY DFS should respect the privacy of technology users, and limit its regulation to what is proportionate to the real threat at hand.

Sincerely,

--
